SKILLS

- **Programming & Scripting**

Java, C, C#, C++, Python,
Assembly x86, PHP, JavaScript,
TypeScript

- **Databases**

SQL, MySQL, Oracle, Postgres

- **Web & Software Technologies**

React, JQuery, Angular, HTML,
CSS, Cypress, Swagger,
Spring Boot, .NET

- **Tools & Version Control**

Git / GitHub, Bitbucket

- **Development Practices**

OOP, Agile methodologies (Scrum)

- **Soft Skills**

Teamwork, Problem-Solving,
Communication, Creativity

- **Languages**

Portuguese (Native), English
(Fluent)

PROFILE

I am a Computer Engineering graduate currently seeking an opportunity to take my first steps in the software engineering industry. I'm exploring roles across technological fields, including software, web, and game development, in both backend and frontend areas.

EXPERIENCE

Backend Developer Intern — ITSector (02/2026 - 06/2026)

Backend development internship focused on building a web application using Java and Spring Boot, including API development and database integration.

Freelance Java Developer — Portal Rumo Mediação Imobiliária SA

Developed a custom Java application for Portal Rumo Mediação Imobiliária SA, providing ongoing maintenance, improvements, and bug fixes.

Game Developer — NEI-ISEP GameJam 2026

Participated in the NEI-ISEP GameJam 2026, collaboratively developing 'The Kill', a game built with the Godot engine.

NEI-ISEP - Informatics Student Association (10/2023 - 06/2026)

- Informatics Department (10/2023 - 07/2025): Developed websites for the association's events.
- External Relations Department (07/2025 - 06/2026): Maintained ongoing communication with companies to secure their engagement and support for events.

Technical Intern - BITSHOP Paredes (09/2022 - 05/2023)

Performed OS installations, hardware diagnostics and maintenance, and provided technical support to customers.

EDUCATION

Bachelor's Degree in Computer Engineering - Instituto Superior de Engenharia do Porto (2023 - 2026)

Examples of work include developing a monitoring system for a multi-drone show, integrating *Java*, *C*, and building a resource management platform for a port authority with *Angular*, *OAuth 2.0* authentication, automated *Cypress* testing, and testing in *Swagger*.

High School (Informática Aplicada à Web) - Colégio de São Gonçalo (2020 - 2023)

Developed multiple projects such as a School Management Platform as part of a Professional Aptitude Test. Created a full web platform to manage school operations, combining *PHP* backend logic with a custom frontend built using *HTML*, *CSS*, and *JavaScript*.

PERSONAL PROJECTS

Game Development Projects - FlawedBits

Built small-scale games as learning projects using Unity and GameMaker. All the projects are tracked and stored in a public GitHub organization ([FlawedBits](#)) and I publish from time to time some updates on the development on social media ([Bluesky](#)).
